

# Johne's Testing

**The CIS Johne's Monitoring Services provides testing of your cattle to help manage the potential disease affecting your current and future herd.**

Johne's is a chronic progressive intestinal disease caused by the infection with *Mycobacterium avium* subspecies paratuberculosis (MAP). Johne's disease has a significant impact on the technical performance of the cow, affecting productivity and fertility.

# CIS CHeCS\* monitoring service for Johnes includes:-

- CIS CHeCS\* monitoring service for generating results
- Quarterly whole herd testing service with milk recording
- British Cattle Veterinary Association (BCVA) accredited vet to oversee results
- Access and view results online via CIS YourHerd
- Review vet comments for the whole herd or individual animals

*\*CHeCS is an opt in scheme*
