

Identify your non pregnant cows with PregCheck

The CIS PregCheck service helps you manage the reproductive programme for your herd. The service makes it easy to minimise the days that cows are not pregnant at any time throughout gestation. The CIS PregCheck service is non-invasive and hassle free by testing samples from milk recording.

The first test can be used from 28 days after service and 60 days after calving. Results flagged as a recheck will be retested free of charge.

The milk pregnancy test is based on ELISA technology and detects the presence of Pregnancy Associated Glycoproteins (PAGs) in the milk sample. It has a 98% level of accuracy.

Incorporate milk pregnancy testing into your routine milk recording with CIS.

Meet the CIS team and enjoy complimentary refreshments at:

Dairy Show, Shepton Mallet - Wednesday 4th October

Welsh Dairy Show, Carmarthen - Tuesday 24th October

AgriScot, Edinburgh - Wednesday 15th November
