

CIS Data Links

The CIS services are compatible with on farm and advisor software.

One of the great benefits of recording with CIS is that YourHerd can be used as a standalone tool or be used in conjunction with software that is already integrated on farm, or used by your advisors.

The CIS strives to be compatible with all on farm software, and link to the majority of parlour software available in the UK.

Data Links:-

The CIS has developed many two-way data exchange links; you choose the software that suits your individual needs.

Independent Software Companies

- Cow Alert
- Cow Manager
