

PregCheck

Managing the reproductive cycle on your farm.

From timely breeding to pregnancy confirmation to successful calving, PregCheck is a critical component for today's dairy farms. The service is non-invasive and hassle free by testing samples from milk recording.

The milk pregnancy test is based on ELISA technology and detects the presence of Pregnancy Associated Glycoproteins (PAGs) in the milk sample. It has a 98% level of accuracy.

PregCheck Service includes:-

- Most effective in regular milk recording herds with accurate breeding and service data.
- Least invasive form of pregnancy testing.
- Sampling program can be done during routine milk recording.
- Up to three tests may be defined per lactation – post service, mid term and before drying off.
- First test must be more than 28 days after service and 60 days after calving.
- Results will be positive, negative or recheck.
- Rechecks (inconclusive tests) are free of charge.
- Results can be viewed on the secure web-based YourHerd portal and MobileHerd app.
